Collaborating with Industry

About us

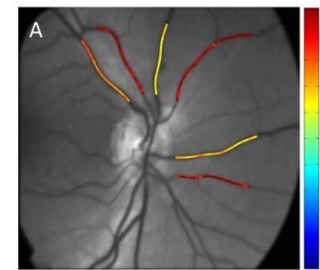

We are a knowledge exchange branch of the University of Glasgow's Institute of Gravitational Research.

Our expertise is based in Gravitational Wave astronomy, which requires the analysis of weak signals buried in non-stationary noise. Bayesian methods are well suited to identifying signals in data of this nature.

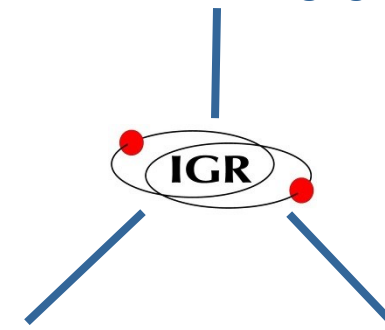

We have over 10 years of experience in this field, and have applied our knowledge in collaborative efforts with other research groups in both Industry and Academia. These applications span a wide range of disciplines, from Biomedical imaging to Defence and beyond.

We have a history of successful and mutually beneficial projects, and are looking to expand this portfolio.
