LIGO India meeting

26th November 2019, 9-10 UK (13:30-14:30 Pune, India)

1) The next collaboration meeting being held in India Dec 4th to 6th

- Organisation: Visa process is straightforward, those who have booked to send their travel plans (arrival/departure) to LIGO secretariat and Sukanta.
- Those flying to India from UK: Siong, Chris, Martin, Giles, Jordan. Looking for more members from different UK institutions however it was noted that the meeting is near the finesse workshop dates.
- Finalising talk schedules maybe sent out later today.
- Open data hands on session makes use of online notebooks that may run slowly.
 Action: To make a link available on the website in order to download beforehand.
 Dependencies/packages list made available on website too.

2) <u>Finesse workshop being held at IUCAA from Dec 18th to 21st.</u>

- Suresh is dealing with the workshop and everything is going well sending out invitations tomorrow.
- Another telecon to be scheduled for Dec 10th for mentors that have a clear program.
- Travel for Anna, Sean, Philip and Gautam sorted

3) STFC UKRI

 Head of Astronomy panel contacted Giles and outlined a future program which Giles modified and sent back to distribute throughout the UK. Ongoing discussion to turn the outline into a proposal. It was mentioned that face to face meetings strengthen relations and the a 2-3 year program can be discussed next week.

4) Shipment to India

- Q measurement sticking point. 2 options: Pick up consignment from Strathclyde and get insurance through India. Or, let an agency pack the instrument, get insurance at the airport to clear customs.
- Insurance on the system is ~5%. Insurance value is £125,000 so £1.5K on customs
 which can come from the UK Grant, same with shipping. India may raise an invoice
 at customs and be reimbursed from UK.
 - Action: Jordan to e-mail Stuart to choose the best way forward.

5) GW leaflet

- Neil updates on translation for GW leaflet. English Is finished, will update when translation is finished on two languages.
- Some discussion on mentioning distance to the source on page 1, but members believe that may clutter the first page and it was mentioned on page 3.

6) Future meetings

 UK could support sending people out to India to support Nation Science Day on Feb 28th. This could run for an additional day due to leap year. Its apparently a dense day "if you like that go for it".

7) <u>UK Activities</u>

- Nancy Gupta been in Glasgow for 3 months working on stabilisation of a 1515nm laser using a feedback method. Nancy is coming from the India Institute of Technology Roorkee. Possible follow up links: Professor of quantum optics Ajay Wasan.
- Would be good to get UK students to India
- In the process of capturing information from student projects at Glasgow, a website video bank of student experience.
- 8) Tentative date for next year meeting: Sometime during summer.
